# Implementation Guide SMARTSMS 3.0 web services

## 1. SmartSMS 3.0

### 1.1.1 Brief description

With SMARTSMS 3.0 web services you can send SMS by calling a function on Internet. There are several web services you can call depending on what you want to send. To send SMS with SMARTSMS 3.0 web services you need to have a SMARTSMS 3.0 account.

## 2. SMS user accounts

There are two different SMS accounts in SMARTSMS 3.0, prepaid or invoice account. With the prepaid account you pay a pot that you use to send SMS. With the invoice account you pay a monthly fee, you will then get an invoice with the amount of SMS you have send

### 2.1.1 Prepaid SMS account

With the prepaid SMS account you need to prepay an amount to your SMS account before you can send any SMS. You can make your payment with credit card or by a Swedish bankgiro.

For every SMS you send, the prepaid amount is reduced. It works like a prepaid phone card.

You will receive an e-mail to your register e-mail address when your pot has reached a certain lower level. You will also receive an e-mail to your register e-mail address when your pot is finish; your account cannot send anymore SMS before you have refilled your pot. You can always login to your account on *smartsms.se* to check the current amount on your pot.

You have to be sure that your pot is not empty. If your pot is empty you are not able to send any SMS from your account.

Your have to use your prepaid account at least once a year, if not your account will be removed and your pot will be lost (send at least one SMS every 365 days). You will get several warnings to your register e-mail address before your account is removed and your pot is lost.

B.G. 5551-2404

## SMARTSMS WEBSERVICES 3.0

Företagsnamn/Company name <b>WBS AB</b>	Dokumentnamn/Name of document SmartSMS30_WEBSERVICES.doc			Sida/Page 6 (55)
Utfärdare (avd nr, namn, tfn, geografisk placering, sign)/Issuer (dept, name, phone, place, sign) Magnus Pernsved	Datum/Date 2010-01-05	Bilaga/Appendix	Flik/Insert	Reg nr/Reg no
Ärende/Subject SmartSMS				
Mottagare (avd nr, namn, geografisk placering)/Receiver (dept, name)				

### 2.1.2 Invoice SMS account

With invoice SMS account you pay a monthly fee.  
The invoice account is most suitable for company use.

You can send SMS without worrying about that your pot is empty.  
You will then get an invoice with the amount of SMS you have send since last invoice.

There are also some extra functions in SMARTSMS 3.0 that's only included in the invoice account.

## 3. Web services

Web Services denotes the web-based computer programs that communicate and collaborate dynamically with other web services in the same way that a person can surf various web sites.

World Wide Web Consortium defines a Web service as follows:

A Web service is a computer program that is identified by a URI, whose interfaces and bindings can be defined, described and discovered as XML objects. A Web service supports direct interactions with other software agents using XML-based messages exchanged via Internet-based protocols.

Web services today are frequently just Application Programming Interfaces (API) or web APIs that can be accessed over a network, such as the Internet, and executed on a remote system hosting the requested services.

### 3.1.1 SMARTSMS 3.0 web service URI

The web services API is described in the WSDL file.  
The traffic to the web services are protected by a SSL certificate.  
The wed URI and the location of the WSDL file for SMARTSMS 3.0 is:  
<https://www.smartsms.nu/webservice/smsservice30.asmx>

### 3.1.2 Web service description

At <https://www.smartsms.nu/webservice/smsservice30.asmx> you can see the operations that are supported.

### 3.1.3 *SendSimpleSMS30*

Send simple SMS request.  
The API call to `SendSimpleSMS30` should contain the following parameters.

WBS Wireless Business Solutions AB		
Norra Ågatan 10	Phone +46 31 209919	Org.nr 556587-4731
416 64 Göteborg	Fax +46 31 3390799	B.G. 5551-2404
<a href="http://www.wbsab.se">www.wbsab.se</a>	E-mail:info@wbsab.se

HLRLookupResult as string
    
```

### 3.1.19 Sent

This web service is only for internal use.

## 4. Web service API parameters

Several parameters has to be stated when you call SMARTSMS 3.0 web services. Some are mandatory others are optional. Below is a description about the parameters.

### 4.1.1 Request parameter description

Element	Type	M/O/I	Default Value	Max length	Description
userReference	string	O		150	User reference to keep track of SOAP requests and responses (WS-I recommendation). The server echoes whatever value is provided.
originatingAddress	string	O	No value set	16	The originating address for the outgoing SM. Type of originating address is defined by the originatorTON parameter. Short number max length is 16. Alpha numeric sender is limited to GSM default Alphabet with max length 11 characters. MSISDN sender max length is 16

SMARTSMS WEBSERVICES 3.0

Företagsnamn/Company name <b>WBS AB</b>		Dokumentnamn/Name of document SmartSMS30_WEBSERVICES.doc		Sida/Page 21 (55)
Utfärdare (avd nr, namn, tfn, geografisk placering, sign)/Issuer (dept, name, phone, place, sign) Magnus Pernsved		Datum/Date 2010-01-05	Bilaga/Appendix	Flik/Insert
Ärende/Subject SmartSMS				
Mottagare (avd nr, namn, geografisk placering)/Receiver (dept, name)				

destinationAddress	string	M		40	The MSISDN that the SM should be sent to, starting with country code. Example: 46762050312. For some markets (where the Consumer MSISDN must be obfuscated) this value can also be an alphanumeric alias, prefixed with"#".
userData	string	O	Empty message	280	The message content, see paragraph 8 for more info about userData.
userDataHeader	string	O	No user data header	280	User Data Header together with the User Data can contain up to 140 (i.e. 280 when hex-encoded) octets. This parameter is always hex-encoded.
urlTitle	string	M	No urlTitle	49	The URL title in a push SMS. The URL title and URL can contain max 98 characters together. Any character from the UTF-8 character set can be used.
URL	string	M	No URL	49	The URL in a push SMS. The URL title and URL can contain max 98 characters together.
DCS	integer	O	17	3	Data Coding Scheme. Behaviour may vary with Operator integrations.
relativeValidityTime	integer	M	Max 172800 (48 hours)	10	Relative validity time in seconds (relative to the time for the submission to smartsms). Behaviour may vary with Operator integrations.
deliveryTime	string	O	Immediately	25	The message can be delivered with delayed delivery time. Format: yyyy-MM-dd HH:mm:ss Z, example: 2000-01-01 01:01:01 -0000. Behaviour may vary with Operator integrations.
connectName	string	O	According to connect configuration	50	This field allows smartsms to route messages in a flexible manner, which may or may not be content provider specific.
charge	string	O		50	Mark SMS with a customer name to charge.
tariffClass	string	M		40	Tariff class for the message, representing the price of a premium message.
referenceId	string	O	No value set	150	Referenced order of the premium message, normally a message ID from an MO Mobile Originating message (SMS or MMS) Mandatory for premium messages.
contentCategory	string	O	No value set	40	The content category. Set to #NULL# if not used or not supported by the market. Mandatory for premium SMS. Market specific information.

## SMARTSMS WEBSERVICES 3.0

Företagsnamn/Company name <b>WBS AB</b>	Dokumentnamn/Name of document SmartSMS30_WEBSERVICES.doc			Sida/Page 22 (55)
Utfärdare (avd nr, namn, tfn, geografisk placering, sign)/Issuer (dept, name, phone, place, sign) Magnus Pernsved	Datum/Date 2010-01-05	Bilaga/Appendix	Flik/Insert	Reg nr/Reg no
Ärende/Subject <b>SmartSMS</b>				
Mottagare (avd nr, namn, geografisk placering)/Receiver (dept, name)				

contentMetaData	string	O	No value set	1000	The content meta data. Set to #NULL# if not used or not supported by the market. Market specific information.
username	string	M		64	The Content Providers username provided by WBS.
password	string	M		64	The Content Providers web service password provided by WBS.

### 4.1.2 Response parameter description

Element	Type	M/O/I	Default Value	Max length	Description
userReference	string	O		150	Echoed request user reference id
messageId	string	M		50	Smartsms unique message ID for successful transaction, empty string on failure.
gatewayId	string	M		50	
responseCode	integer	M		5	Smartsms response code, 0 indicates successful transaction. See separate table for complete list of response codes.
reasonCode	integer	O	0	5	The reason code may apply for specific response codes. The support for reason codes varies with operator integrations and is provided with best effort.
responseMessage	string	M		200	Response textual description (e.g. error text). Contains response codes when sending a distribution list and receiving partial success response code. The max length is not applicable for partial success response. See response codes table for more information.
temporaryError	boolean	M		5	Indicates whether the reason for failure is temporary or permanent (i.e. if it is useful to make a retry attempt after waiting a few minutes). This is only an indication of the error type; error codes should be used in combination with billing status and this parameter when deciding whether or not a retry attempt is applicable.
billingStatus	integer	M		1	Billing status: 0 . Unknown 1 . Pending 2 . Not billed

Företagsnamn/Company name <b>WBS AB</b>	Dokumentnamn/Name of document SmartSMS30_WEBSERVICES.doc			Sida/Page 23 (55)
Utfärdare (avd nr, namn, tfn, geografisk placering, sign)/Issuer (dept, name, phone, place, sign) Magnus Pernsved	Datum/Date 2010-01-05	Bilaga/Appendix	Flik/Insert	Reg nr/Reg no
Ärende/Subject <b>SmartSMS</b>				
Mottagare (avd nr, namn, geografisk placering)/Receiver (dept, name)				

					3 . Billed Billing status Pending is only applicable on specific markets with premium SMS.
VAT	double	M	Market default value	5	The VAT is used only with premium SMS. Returns -1 when not applicable.
smsCost	double	M		5	The SMS const depending on connect, discount and euro rate. The SMS price could be change afterwards if an error occurred during the price calculation.

### 5. Send SMS via HTTP get or post

You can send SMS of different type by calling an URL with specific predefined parameters. The call returns a string with the result from the SMS gateway.

#### 5.1.1 SendSimpleSMS30ASP - HTTP URL string

Replace parameter with your account values in the URL below. Paste this URL in a web browser to test send an SMS.

```
https://www.smartsms.nu/webservice/httpSMS/SendSimpleSMS30ASP?OriginatingAddress=smartsms&DestinationAddress=0733209918&UserData=TestSMS&ConnectName=CheapConnect&ContentCategory=sport&Charge=WBSAB&UserReference=mytest&UserName=myusername&PassWord=myspass
```

#### 5.1.2 SendSimpleConcatenatedSMS30ASP - HTTP URL string

Replace parameter with your account values in the URL below. Paste this URL in a web browser to test send an SMS.

```
https://www.smartsms.nu/webservice/httpSMS/SendSimpleSMS30ASP?OriginatingAddress=smartsms&DestinationAddress=0733209918&UserData=This is a very long SMS text&UserDataHeader=050003FF0201&ConnectName=BusinessConnect&ContentCategory=sport&Charge=WBSAB&UserReference=mytest&UserName=myusername&PassWord=myspass
```

#### 5.1.3 SendAdvancedSMS30ASP - HTTP URL string

Replace parameter with your account values in the URL below. Paste this URL in a web browser to test send an SMS.

```
https://www.smartsms.nu/webservice/httpSMS/SendSimpleSMS30ASP?Origin
```

Ärende/Subject SmartSMS				
Mottagare (avd nr, namn, geografisk placering)/Receiver (dept, name)				

```
atingAddress=smartsms&DestinationAddress=0733209918&UserData=This is my SMS text&UserDataHeader=&DCS=17&RelativeValidityTime=&DeliveryTime=&ConnectName=BusinessConnect&ContentCategory=sport&Charge=WBSAB&UserReference=mytest&UserName=myusername&PassWord=mypass
```

### 5.1.4 SendAdvancedPushSMS30ASP - HTTP URL string

Replace parameter with your account values in the URL below.  
Paste this URL in a web browser to test send an SMS.

```
https://www.smartsms.nu/webservice/httpSMS/SendAdvancedSMS30ASP?OriginatingAddress=smartsms&DestinationAddress=0733209918&UserData=This is my SMS text&UserDataHeader=&DCS=17&RelativeValidityTime=&DeliveryTime=&ConnectName=BusinessConnect&ContentCategory=sport&Charge=WBSAB&UserReference=mytest&UserName=myusername&PassWord=myspass
```

### 5.1.5 SendAdvancedPremiumSMS30ASP- HTTP URL string

Replace parameter with your account values in the URL below.  
Paste this URL in a web browser to test send an SMS.

```
https://www.smartsms.nu/webservice/httpSMS/SendAdvancedPremiumSMS30ASP?OriginatingAddress=smartsms&DestinationAddress=0733209918&UserData=This is my SMS text&UserDataHeader=&DCS=17&RelativeValidityTime=&DeliveryTime=&TariffClass=&ReferenceId=&ContentCategory=sport&Charge=WBSAB&UserReference=mytest&UserName=myusername&PassWord=myspass
```

### 5.1.6 HTTP URL return values

The URL returns parameters from the SMS gateway.  
The parameters are:

```
userReference  
messageId  
gatewayId  
responseCode  
reasonCode  
responseMessage  
temporaryError  
billingStatus  
VAT
```

Mottagare (avd nr, namn, geografisk placering)/Receiver (dept, name)				

smsCost

Look at *Response parameter description* to find out more about each parameter.

## 6. SMS types

You can send several different types of SMS with the standards functions in web services 3.0.

- *Simple SMS*
- *Concatenated SMS*
- *Flash SMS*
- *Push SMS*
- *Time scheduled SMS*
- *Premium SMS*

With the functions *SendAdvancedxxxSMS30* you can configure your own parameters to send several different types of SMS.

### 6.1.1 Simple SMS

A simple SMS contains a maximum of 160 chars.  
No extra parameters are needed.

### 6.1.2 Concatenated SMS

There are no directly limitations on how many concatenated SMS you can use to build a large SMS. Theoretical it could be 255 concatenated SMS, but it should also be supported by the receiver's mobile phone.

To be sure to that the SMS reach the receiver, it's recommended not to concatenate more than four SMS at a time.

<i>Parameter</i>	<i>Description</i>
UD UserData	The message text (Max 153 characters each message).
	First message UDH=050003FF0201 UD="This is a very long SMS text....."
	Second message UDH=050003FF0202 UD="and this is the second SMS text part."

Org.nr 556587-4731  
B.G. 5551-2404

## SMARTSMS WEBSERVICES 3.0

Företagsnamn/Company name <b>WBS AB</b>		Dokumentnamn/Name of document SmartSMS30_WEBSERVICES.doc		Sida/Page 26 (55)
Utfärdare (avd nr, namn, tfn, geografisk placering, sign)/Issuer (dept, name, phone, place, sign) Magnus Pernsved		Datum/Date 2010-01-05	Bilaga/Appendix	Flik/Insert
Ärende/Subject SmartSMS				
Mottagare (avd nr, namn, geografisk placering)/Receiver (dept, name)				

### UDH User Data Header

Where the UDH (User Data Header) is derived from:

05 = UDHL (no of octets to come)  
 00 = IEI (concatenated message)  
 03 = IEIL (octets used to describe the concatenation)  
 FF = any random number (used to distinct different concatenated messages)  
 02 = no of messages in the concatenation  
 01 = current no in the concatenation

### DCS

The Data Coding Scheme (8 bits), as defined in GSM 03.38. When sending concatenated messages DCS should be set to 17.  
 DCS = 17

### 6.1.3 Flash SMS

Then a flash SMS is received in a mobile phone it pops up like pop up window on top of the screen. When you close a flash SMS the text is gone.  
 A flash SMS must be saved manually in the mobile phone, if you want to show it again.

For example it can be used for passwords or other temporary information.

When you send a flash SMS without using the function `SendSimpleFlashSMS30` the DCS parameter should be set to 16.  
 DCS = 16

### 6.1.4 Push SMS

With a push SMS you can send a web URL with an URL title to a mobile phone in a nice way. Instead of sending an MMS you can send a push SMS with a web link that points to a site or a file that contains information like an MMS.

The maximum length 49 (guaranteed delivery) is the sum of urlTitle and url elements. Which characters that are used in the urlTitle will affect the maximum theoretical length. E.g. if only ASCII characters in the text, the max length of the urlTitle and url elements may add up to 98 characters.

A push SMS can also be named WAP push SMS.

A push SMS can also be sent with the function `SendAdvancedSMS30`. If you need to send a concatenated (premium) push SMS you need to send it with `SendAdvancedSMS30` and add your own parameters.

## SMARTSMS WEBSERVICES 3.0

Företagsnamn/Company name <b>WBS AB</b>		Dokumentnamn/Name of document SmartSMS30_WEBSERVICES.doc		Sida/Page 27 (55)
Utfärdare (avd nr, namn, tfn, geografisk placering, sign)/Issuer (dept, name, phone, place, sign) Magnus Pernsved		Datum/Date 2010-01-05	Bilaga/Appendix	Flik/Insert
Ärende/Subject SmartSMS				
Mottagare (avd nr, namn, geografisk placering)/Receiver (dept, name)				

### 6.1.4.1 Sample WAP push string

A WAP Push example which we will use here is as follows:

```
DC0601AE02056A0045C60C03 7777772e736d617274736d732e7365 001103
313233343536373839 000103 536d617274534d53 000101
```

URL title: *smartSMS*

URL: *www.smartsms.se*

UserDataHeader: 0605040b8423f0

UserData:

```
DC0601AE02056A0045C60C037777772e736d617274736d732e7365001103313233343
536373839000103536d617274534d53000101
```

**The UDH or User Data Header explained : UserHeader=0605040b8423f0**

In the string above, the UserHeader parameter can be explained as follows:

06 is the Length of the User Data Header

05 is the Information Element Identifier (IEI; application port addressing scheme, 16-bit port address)

04 is the Information Element Data Length (IEDL)

0B84 is the destination port no.

23F0 is the origin port no.

**Data Wrapping, The rest in UserData:** DC0601AE02056A0045C60C03

Next comes the data wrapping info that goes around the URL string itself:

DC is the Transaction ID (Push ID)

06 is the PDU type (Push PDU)

01 is the Header Length (just leave it at 01)

AE represents Content Type=application/vnd.wap.sic (0x80 | 0x2E)

02 represents <version>

05 represents <si>

6A represents <charset=utf-8>

00 represents <string>

45 represents <si>

C6 represents <indication>

0C represents http://

03 refers to "next is an ASCII string for the URL, to be terminated with 00"

**The URL string** 7777772e736d617274736d732e7365

Then comes the URL string in our example, this hexadecimal string is:

```
7777772e736d617274736d732e7365 = "www.smartsms.se"
```

WBS Wireless Business Solutions AB

Norra Ågatan 10

416 64 Göteborg

[www.wbsab.se](http://www.wbsab.se)

Phone +46 31 209919

Fax +46 31 3390799

E-mail:info@wbsab.se

Org.nr 556587-4731

B.G. 5551-2404

## SMARTSMS WEBSERVICES 3.0

Företagsnamn/Company name <b>WBS AB</b>		Dokumentnamn/Name of document SmartSMS30_WEBSERVICES.doc		Sida/Page 28 (55)
Utfärdare (avd nr, namn, tfn, geografisk placering, sign)/Issuer (dept, name, phone, place, sign) Magnus Pernsved		Datum/Date 2010-01-05	Bilaga/Appendix	Flik/Insert
Ärende/Subject SmartSMS				
Mottagare (avd nr, namn, geografisk placering)/Receiver (dept, name)				

### Ending Wrapper URL: 000103

Finally, we wrap up the string with some final pieces of information.

00 refers to terminate string with 00

01 represents <indication>

03 refers to "next is an ASCII string for title, terminate with 00"

### The message identifier si-id 313233343536373839

You cannot send two WAP-pushes with the same si-id to the same cell phone, since the handset would discard the last one. If the end-user deletes the first WAP-push, and after that you send another WAP-push with the same id, then it will be shown in the phone. Therefore, you must configure this si-id randomly.

313233343536373839 = "123456789"

### The title in our example is 536d617274534d53

Then comes the URL-title string in our example, this hexadecimal string is:

536d617274534d53 = "SmartSMS"

### Ending Wrapper URL-title

00 we terminate the title string with 00

01 represents <indication>

01 represents <si>

The final complete hexadecimal WAP PUSH string is hence completed!

### 6.1.5 Time scheduled SMS

With the function `SendSimpleTimeScheduledSMS30` you can send SMS that will reach the receiver in a future time.

The time scheduled SMS will wait at the SMS gateway to the future time is reached before it is send to receiver. All functions with the parameter `DeliveryTime` can be used to time schedule an SMS. Not all connects can be used to send time scheduled SMS.

### 6.1.6 Premium SMS

With premium SMS you can charge the receiver a sum of 1 to 200 SEK including VAT.

To be able to send premium SMS to a receiver, the receiver must have order a service from the content provider.

The order is made by an incoming SMS to a short number from the receiver.

This incoming SMS has a reference id that must match the prior incoming SMS order then sending a premium SMS to receiver

E-mail:info@wbsab.se

Org.nr 556587-4731

B.G. 5551-2404

## SMARTSMS WEBSERVICES 3.0

Företagsnamn/Company name <b>WBS AB</b>	Dokumentnamn/Name of document SmartSMS30_WEBSERVICES.doc			Sida/Page 29 (55)
Utfärdare (avd nr, namn, tfn, geografisk placering, sign)/Issuer (dept, name, phone, place, sign) Magnus Pernsved	Datum/Date 2010-01-05	Bilaga/Appendix	Flik/Insert	Reg nr/Reg no
Ärende/Subject SmartSMS				
Mottagare (avd nr, namn, geografisk placering)/Receiver (dept, name)				

Normally the content provider have an own prefix connected to a short number. When you send a premium SMS to a receiver the originating address must be a valid short number like 72777, 72401 or 72790. A zero charge number like 71160 can not be used as originating address for premium MT SMS.

The Mobile Terminated, MT premium SMS must contain some information about the charger and the premium SMS tariff.

More information about the bearer MT premium SMS content and other rules that the content provider must follow are written in the "MORGAN, CODE OF CONDUCT" document. The MORGAN document can be downloaded from <http://www.morganforum.se/>.

When you send a premium MT SMS you will receive a response from the web services. In that response a billingStatus is included. If billingStatus is 3 it means that this receiver is charge with the tariff you have given.

## 7. Function parameters

Here are the parameters I our web services explained more accurate.

### 7.1.1 Originating Address

Who is sending the SMS?  
This sender (originating address) will appear as sender in the receiver mobile phone.

If you use an alphanumeric sender (sender text that contains non numeric characters) the maximum length is 11 characters.

If you use a mobile number as sender (originating address) the maximum length is 16 numbers.

### 7.1.2 Destination Address

To send an SMS to a Swedish mobile phone the destination address does not needed to contain the Swedish country code (+46) because its default.

A mobile number to Sweden could in two ways format: 0733209918 or +46733209918. The first zero should be removed in the mobile number and a + character must be added before the country code

To send SMS to any other countries except Sweden a country code must always be added. Sample SMS number to Norway +474xxxxxx

## SMARTSMS WEBSERVICES 3.0

Företagsnamn/Company name <b>WBS AB</b>	Dokumentnamn/Name of document SmartSMS30_WEBSERVICES.doc			Sida/Page 30 (55)
Utfärdare (avd nr, namn, tfn, geografisk placering, sign)/Issuer (dept, name, phone, place, sign) Magnus Pernsved	Datum/Date 2010-01-05	Bilaga/Appendix	Flik/Insert	Reg nr/Reg no
Ärende/Subject SmartSMS				
Mottagare (avd nr, namn, geografisk placering)/Receiver (dept, name)				

### 7.1.3 User Data

SMS body text.

Depending on the DCS parameter settings, user data could contain ASCII, HEX or binary characters.

### 7.1.4 User Data Header

Depending on the DCS parameter settings, user data header could contain HEX or binary characters.

UDH information is used to send concatenated, push SMS etc.

### 7.1.5 DCS

Data Coding Scheme, a value used in SMS to indicate the message class.

Sample:

DCS 5 = Push SMS

DCS 16 = Flash SMS

DCS 17 - Normal SMS

DCS 25 - Unicode SMS

See link below for a complete information about DCS.

[http://www.3gpp.org/ftp/Specs/archive/03\\_series/03.38/0338-720.zip](http://www.3gpp.org/ftp/Specs/archive/03_series/03.38/0338-720.zip)

### 7.1.6 Relative Validity Time

Relative validity time in seconds (relative to the time for the submission to SmartSMS).

Default value is 172800 seconds, (48 hours).

60sec x 60min x 48hour = 172800 seconds

If SMS is not received to mobile phone within the relative validity time, the SMS will be set to expire (Validity period expired) and will not be sent to receiver.

An SMS that is expired will still be charge.

Sample:

If you send an SMS to a receiver at 17:00 and the receiver must have this information before 18:00 or else the information is useless or unwanted.

In this case you can set the relative validity time to 3600 sec (1 hour)

Relative validity time behavior may vary with Operator integrations.

Utfärdare (avd nr, namn, tfn, geografisk placering, sign)/Issuer (dept, name, phone, place, sign) Magnus Pernsved		Datum/Date 2010-01-05	Bilaga/Appendix	Flik/Insert
Ärende/Subject SmartSMS				
Mottagare (avd nr, namn, geografisk placering)/Receiver (dept, name)				

### 7.1.7 Delivery Time

The message can be delivered with delayed delivery time. Format: yyyy-MM-dd HH:mm:ss - TimeZone,  
example: 2000-01-01 01:01:01 +0100

The SMS gateway is always set on UTC time.  
UTC time is not changed for winter and summertime.  
When sending a time scheduled SMS to a country that's currently on summertime, the time zone factor must be changed.

#### Wintertime:

To send an SMS to a Swedish operator with delivery date 2010-04-01 and time 15:00, the parameter should look like this: 2010-04-01 15:00:00 +0100

#### Summertime:

To send an SMS to a Swedish operator with delivery date 2010-04-01 and time 15:00, the parameter should look like this: 2010-04-01 15:00:00 +0200

Relative validity time behavior may vary with Operator integrations.

#### 7.1.7.1 Time zones

This is a sample of wintertime zones, this don't mean that it's possible to send SMS with SmartSMS to all countries included in this list.

TimeZone	Country
-12	BAKER ISLAND (0° 13 N, 176° 31 W)
-12	HOWLAND ISLAND (0° 48 N, 176° 38 W) (Earhart Light)
-11	AMERICAN SAMOA (Pago Pago)
-11	JARVIS ISLAND (0° 22 S, 160° 03 W) (Millersville)
-11	KINGMAN REEF (6° 24 N, 162° 24 W)
-11	MIDWAY ISLANDS (28° 13 N, 177° 22 W)
-11	NIUE (Alofi)
-11	PALMYRA ATOLL (5° 52 N, 162° 06 W)
-11	SAMOA (Apia)
-10	COOK ISLANDS (Rarotonga- Avarua)
-10	FRENCH POLYNESIA (TAHITI Papeete, TUAMOTU ARCHIPELAGO, TUBUAI ISLANDS)
-10	JOHNSTON ATOLL (16° 45 N, 169° 31 W)
-10	TOKELAU, New Zealand (Fakaofu, Nukunonu, Atafu)
-10	UNITED STATES (HAWAII-Honolulu)
-10	UNITED STATES (ALEUTIAN ISLANDS OF ALASKA- Adak dst)
-9	FRENCH POLYNESIA (Gambier Islands)
-9	UNITED STATES (Alaska- Anchorage dst, Fairbanks dst, Nome dst, Unalaska dst)
-8	CANADA (British Columbia- Vancouver dst, Yukon- Whitehorse dst)

### 7.1.8 Tariff Class

The price of a premium message is representing by a tariff class.  
Valid tariff class values are between 1 SEK to 200 SEK

The parameter value should be set without any decimals.

For non-premium messages, the market's zero tariff class must be supplied, SEKO corresponding

Ärende/Subject SmartSMS				
Mottagare (avd nr, namn, geografisk placering)/Receiver (dept, name)				

Sweden is the only valid market for SmartSMS tariff classes.

### 7.1.8.1 Fraud limits

All operators have a fraud limit for a single user every month.  
This means that a user be charge limited total sum every month.  
That includes the sum for all content provider premium services to that special receiver

The limits in Sweden including VAT are:

Operator	Fraud limit	Currency
TELE2	2000	SEK
TELENOR	1200	SEK
TELIA	4000	SEK
TRE	1600	SEK

### 7.1.9 Reference Id

To be able to send premium SMS to a receiver, the receiver must have order a service from the content provider.

The order is made by an incoming SMS to a short number from the receiver.

This incoming SMS has a reference id that must match the prior incoming SMS order then sending a premium SMS to receiver.

### 7.1.10 Content categories

When you send a non premium SMS you could add an optional content category like *carservice*.

The content category should contain information about the SMS content.

Contentcategory:*carservice*

If you send a premium SMS your content category is locked to the categories below.

#### 7.1.10.1 Premium SMS content category:

adult  
advertisement  
business  
charity  
chat  
classified ads

### 7.1.11 Connect names

There are several different connects to send SMS with.  
Connects differ in price depending channel characteristics.

#### 7.1.11.1 All connect names

All connect except PremiumConnect can be used to send SMS outside of Sweden.  
Premium SMS can only be sent to Swedish operators.

##### PrimeConnect

Our best connect, especially suited for time critical and sensitive information  
Most suited for company use.

##### SwedishConnect

This connect only send SMS with Swedish operators.  
Same connect that sends premium SMS within Sweden.

Most suited for company use.

### BusinessConnect

A high end messaging product delivering network operator grade performance cost efficiently  
Excellent quality to price ratio.  
Our most used connect.  
Most suited for company use.

### PremiumConnect

This connect only send premium SMS with Swedish operators to Swedish mobile numbers.  
PremiumConnect is for Company use only.  
Not for SMSMAIL 3.0.

### EconomyConnect

EconomyConnect is now outdated and is automatically switched to BusinessConnect when used. Use BusinessConnect as a replacement for EconomyConnect.

### CheapConnect

Our cheapest connect that gives you even more value for your money.  
Most suited for personal use.

## 8. HLR Lookup definition

The HTTP HLR interface allows you to quickly look up information about a mobile phone number from its Home Location Register (HLR) database.  
A HLR report can show the network and country the MSISDN belongs to as well as information showing whether the number has been ported, if it is valid, and if it is available to receive SMS.

The 'Home Location Register' or HLR is a central database that contains details of each mobile phone subscriber that is authorized to use the GSM core network.

Each mobile network has one HLR, although there may be many HLR servers creating a single virtual HLR.

More precisely, the HLR stores details of every SIM card issued by the mobile phone operator. Each SIM has a unique identifier called an IMSI which is one of the primary keys to each HLR record.

A HLR also stores the following data about a mobile subscriber:

- Current servicing MSC
- Status of subscriber
- Temporary handset error code if applicable

## SMARTSMS WEBSERVICES 3.0

Företagsnamn/Company name <b>WBS AB</b>	Dokumentnamn/Name of document SmartSMS30_WEBSERVICES.doc			Sida/Page 42 (55)
Utfärdare (avd nr, namn, tfn, geografisk placering, sign)/Issuer (dept, name, phone, place, sign) Magnus Pernsved	Datum/Date 2010-01-05	Bilaga/Appendix	Flik/Insert	Reg nr/Reg no
Ärende/Subject SmartSMS				
Mottagare (avd nr, namn, geografisk placering)/Receiver (dept, name)				

SmartSMS offers a HLR Lookup service which allows mobile numbers (MSISDN's) to be queried in order to learn:

- Whether they are valid
- If the subscriber is available to receive SMS
- If there is an error code preventing SMS delivery
- If the number has been ported to another mobile network

### 8.1.1 HLR web service call

The HLR web service is called with five parameters.

**MSISDN**: The mobile number you want to look up. The mobile number must contain a valid language prefix.  
Sample, +467xxxxxxxx for Sweden.

**ReturnType**: Type of response for your HLR request  
H = Http return address, E = Email address  
Include `http://` in your address if you use parameter H.

**ReturnAddress**: An Http address or an email address, must match the **ReturnType** parameter

**UserName**: SmartSMS username

**Password**: SmartSMS web service password

### 8.1.2 HLR response parameter description

The HLRLookup response string can contain the following parameters:

OK mobil number

```
QueryId=216784363

## 9. SDR SMS Delivery Report

It's possible to get SDR SMS Delivery Reports send to you by a HTTP link set by you, or by an email given by you.

These settings can be done when you have logged in to your SmartSMS account.

SMS Delivery Reports signals the status on your sent SMS.

You can then determine if your SMS has arrived at your receiver's mobile phone.

### 9.1.1 SDR by HTTP

If you use the HTTP link solution you must have a site that will answer the SDR push from the SMSMail application.

The address before the "?" mark must be set by you at SmartSMS.se.

Sample on string pushed to your SDR receiver address:

```
http://www.mysiste.se/SDRReceiver.ashx?GateWayId=1-11843444839&DestinationAddress=46733209918&Operator=BusinessConnect&ReasonCode=0&ReasonCodeInfo=Delivered&ReasonCodeDescription=Message delivered to handset.&StatusCode=0&StatusText=&OperatorTimestamp=20110216 12:45:44&TimeStamp=20110216 12:45:44
```

### 9.1.2 SDR by email

You can also receive your SDR by email.

TimeStamp=20110216 15:40:25

## 10. Pricing policy

The SMS price is depending on several parameters.

### 10.1.1 Pricing parameters

The pricing parameters are.

*The Account name:*

There are a big price different between the different connects.

Use the connect that suite your purpose best.

*The euro rate:*

The SMS price is depending on the euro rate.

The price could change slightly every day.

*SMS discount:*

Your potential SMS discount is automatically recalculated every day.

The discount is depending on the amount of SMS you have sent the last 30 days.

Check *smartsms.se* for the existing discount rate.

No discount is automatically recalculated for prepaid accounts.

## 11. A comment on short message contents

## SMARTSMS WEBSERVICES 3.0

Företagsnamn/Company name <b>WBS AB</b>		Dokumentnamn/Name of document SmartSMS30_WEBSERVICES.doc		Sida/Page 46 (55)
Utfärdare (avd nr, namn, tfn, geografisk placering, sign)/Issuer (dept, name, phone, place, sign) Magnus Pernsved		Datum/Date 2010-01-05	Bilaga/Appendix	Flik/Insert
Ärende/Subject SmartSMS				
Mottagare (avd nr, namn, geografisk placering)/Receiver (dept, name)				

The message content (i.e. the user data parameter) is represented in different alphabets depending on the DCS value. The basics are described in the table below. More information about SMS alphabets can be found in

Alphabet	Applicable	Example (DCS/User data)	Max length	Description
GSM default alphabet	MO and MT	17 / abc@()/	160	Normal text message using the GSM default alphabet, see chapter 9.1.
GSM extended alphabet	MO and MT	17 / €{}[]\	<160	Text message using the GSM default alphabet and extension table, see chapter 9.2. Since every character from the extension table is represented by two characters the actual maximum length is dynamically calculated as: 160 k, where k is the number of extended characters used in the message.
UCS2	MO and MT	25 / ©¼ë®	70	Unicode (16 bit), ISO/IEC 10646 character table.
Binary	MO and MT	21 / 42696e61727921	280	8-bit data binary message. Each byte is represented as a hex value using two characters per byte. The maximum message length is 140 bytes (i.e. 280 characters when hex encoded).

The maximum length of the message decreases as the header length increases when sending messages with user data header specified

Support for different alphabets may vary with operator integrations.

Note: due to a limitation in XML 1.0, some characters in the C0 range (control characters in the 0x0000-0x001F interval) cannot be supported. One of these unsupported characters is <PAGE BREAK>, which is included in the GSM alphabet extension table.

## 12. GSM character tables

The following table lists all characters and their decimal and hexadecimal codes as defined in the "GSM 7-bit default alphabet" text coding scheme. The corresponding character codes defined in ISO 8859 Latin 1 are also provided in the table for ease of reference. The GSM 7-bit default alphabet consists of 128 characters totally and each character is represented by 7 bits. 10 extra characters are defined in the GSM 7-bit default alphabet extension table and they have to be represented through an escape mechanism using the escape character (0x1B).

SMARTSMS WEBSERVICES 3.0

Företagsnamn/Company name <b>WBS AB</b>		Dokumentnamn/Name of document SmartSMS30_WEBSERVICES.doc		Sida/Page 47 (55)	
Utfärdare (avd nr, namn, tfn, geografisk placering, sign)/Issuer (dept, name, phone, place, sign) Magnus Pernsved		Datum/Date 2010-01-05	Bilaga/Appendix	Flik/Insert	Reg nr/Reg no
Ärende/Subject SmartSMS					
Mottagare (avd nr, namn, geografisk placering)/Receiver (dept, name)					

The extra characters are:

{ } [ ] ~ \ and the Euro symbol: €

Form feed  
Caret / circumflex  
Left curly bracket  
Right curly bracket  
Backslash  
Left square bracket  
Tilde  
Right square bracket  
Vertical bar  
Euro sign

The codes of the 10 characters above begin with 0x1B (i.e. the escape character), which indicates they are escaped sequences. For example, the code of the Euro sign is 0x1B65. If the receiving entity (for example, a mobile phone) does not understand the escape mechanism, the escape character should be shown as the space character on the display device.

Character	GSM 7-bit default alphabet (Decimal)	GSM 7-bit default alphabet (Hexadecimal)	ISO 8859 Latin 1 (Decimal)	ISO 8859 Latin 1 (Hexadecimal)

### 13. Security

All SmartSMS web services use SSL (Secure Sockets Layer)

**https:** //www.smartsms.nu/webservice/SmsService30.aspx

### 14. The use of SmartSMS

As in all other communications channels that include computers and software, errors can occur, due to computer, software or other infrastructure failure.

Any of SmartSMS functions must not be used for a life or material saving purpose in case of an emergency.

In these cases, SmartSMS can be used as complement to other channels as phone or mobile phone communication.

WBS AB is trying our best to keep our systems as safe and reliable as possible.

WBS AB cannot be held responsible for any failures in the chain from sender to receiver when sending SMS.

### 15. Support

Support by phone

Open weekdays            9:00-12:00  
   13:00-16:00

Phone: +46 (0)31 209919

Support by e-mail

E-mail address: [support@smartsms.se](mailto:support@smartsms.se)

### 16. Wireless Business Solutions AB

SmartSMS is owned by Wireless Business Solutions AB, WBS AB (556587-4731).  
WBS AB was founded in 2000.

The first version of SmartSMS started in 2002 with SmartSMS 1.0.

WBS AB also owns sites like:
